DETAILED ACTION

Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1 and 2 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sherman (US 3,793,980) in view of Kobayashi et al. (US 3,811,399).

Sherman discloses a marine propulsion system, as shown in Figures 1-17, for a propeller driven boat, said system including a tunnel structure, as shown in Figure 2, that accommodates a propeller shaft, defined as Part #46, with a propeller, defined as Part #50, between a forward end and a trailing end of said tunnel structure, where said tunnel structure assists in the movement of said boat from a starting attitude to a planing attitude, as described in lines 20-38 of column 2.

Sherman, as set forth above, discloses all of the features claimed except for the use of a constant diameter extension of said tunnel structure that extends from a position of said propeller within said tunnel structure to the stern of said boat.

Kobayashi et al. discloses an inboard motor boat, as shown in Figures 1 and 2, with a tunnel structure, defined as Part #5, that accommodates a propeller shaft, defined as Part #22, and a propeller, defined as Part #29, where said tunnel structure

Application/Control Number: 10/629,539

Art Unit: 3617

has a constant diameter extension, as shown in Figures 1 and 2, that extends from a position of said propeller within said tunnel structure to the stern of said boat.

Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention, to utilize a tunnel structure on a boat hull having a constant diameter extension between a propeller and a stern of said boat hull, as taught by Kobayashi et al., in combination with the marine propulsion system as disclosed by Sherman for the purpose of providing a boat hull with improved handling during operation.

Allowable Subject Matter

- 3. Claim 7 is allowed.
- 4. Claims 3-6 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Whitehead (US 4,609,360), Foster (US 4,057,027), Stuart (US 3,626,894 and US 3,515,087) and Huff (US 835,530) all disclose boat hulls with a tunnel structure that accommodates a propeller shaft and a propeller.

Art Unit: 3617

6. Any inquiry concerning this communication from the examiner should be directed to Exr. Lars Olson whose telephone number is (703) 308-9807.
